

METHOD OF PRODUCING NON-BOVINE CHYMOSIN AND USE HEREOF

ABSTRACT

- 5 A method of recombinantly producing a non-bovine pre-prochymosin, prochymosin or
chymosin derived from ruminant species including deer species, buffalo species, antelope
species, giraffe species, ovine species and caprine species; *Camelidae* species such as
Camelus dromedarius; porcine species; or *Equidae* species. The recombinant enzymes
are used in milk coagulating compositions in cheese manufacturing based on cow's milk
10 and milk from any animal species which are used in cheese manufacturing including
camel's milk.
